

And now the App
we've all been
waiting for...

Go to the App Store or
Google Play store
& download

+ **“Microsoft Translator”**

This is the
opening
screen

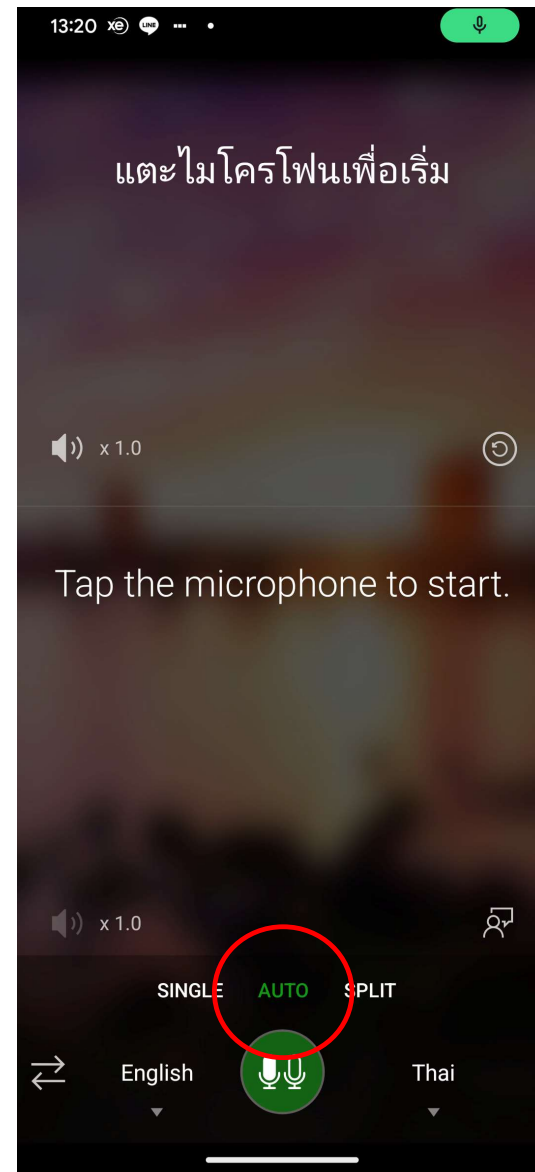

Change the
language
here

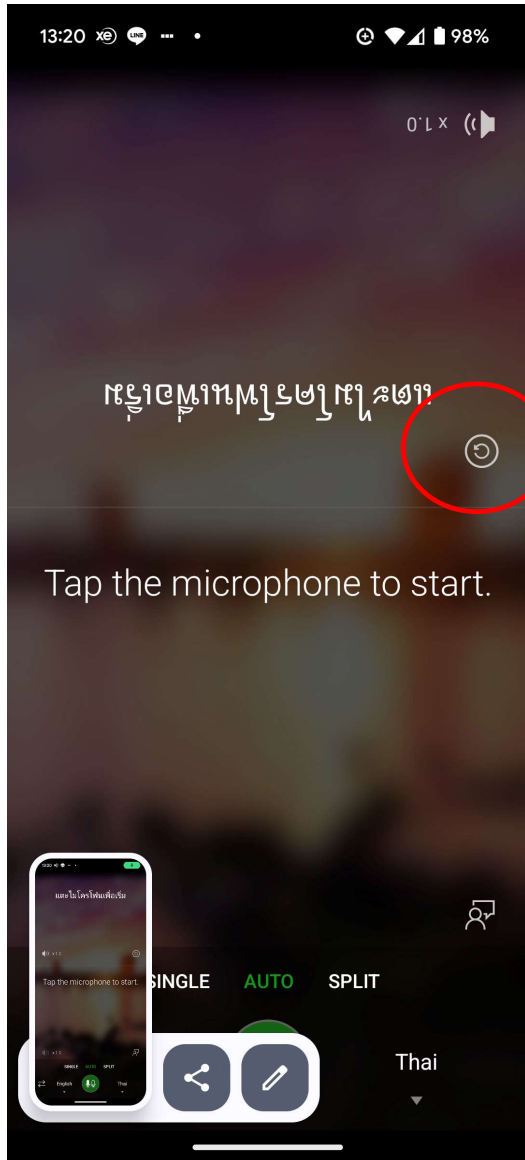

If you press **SINGLE** it works like Google Translate, one way only, speak into it in your language, text above in Thai, no vocal

If you press **AUTO** it prints & says the text in Thai and translates the other voice automatically back into English, when they answer!

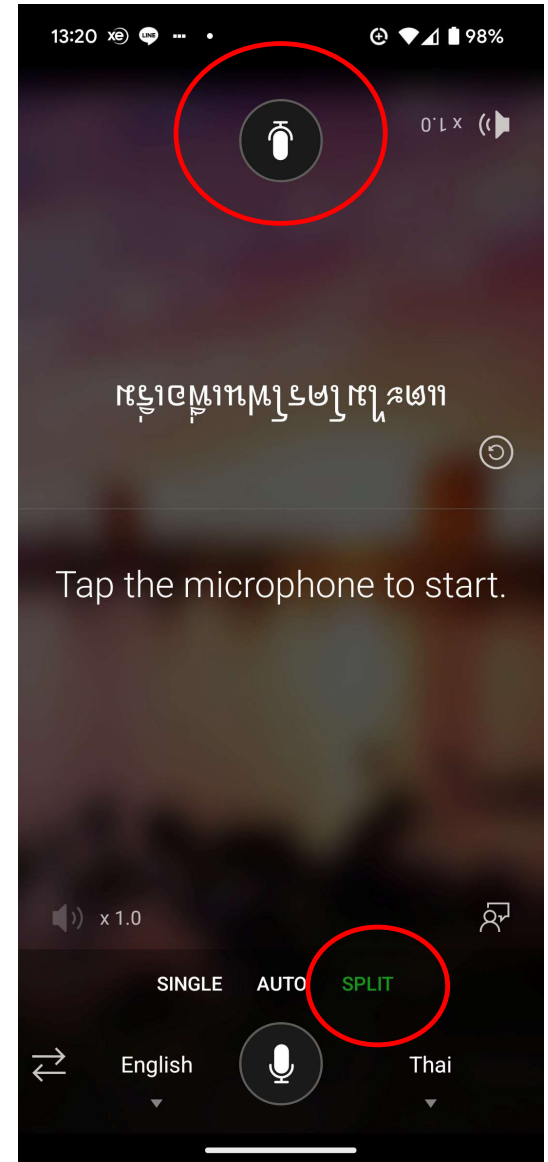

This button turns the translated text upside down, so the other person can read it!

The **SPLIT** button gives the other person, control as the wish!

And it's possible to speak in up to ten different languages
